

News from Trepak straight to your inbox, Sep 2025.

What's new at Trepak?

Time has truly flown by, and our Newsletters have been on pause – but for all the right reasons! We've been incredibly busy all year, and the machines have practically been leaving our facilities one after another. It's clear that Trepak's machines get the job done – we're gaining more and more new customers and exciting projects.

Our two "new" sales reps, Kristoffer Edfeldt (who joined in December 2024) and Joakim Freij (who joined us in January 2025), have reached out to many new, potential, and existing customers. The sales team has been going full throttle since the start of the year, bringing in several exciting opportunities and projects – and more are in the pipeline. Great job, team!

* Please note that the image is a montage. 🎨

We've also strengthened our automation department with Alexander Granberg and our process/project management team with David Bauer – to make room for even more development, production, and customer support. Welcome to the Trepak family! ❤️

Don't forget that we're a development-driven company, and that our machines and lines are custom-built to meet each customer's specific needs. We manufacture the machines on-site in Malmö, thoroughly test them both here and at the customer's location after installation (FAT and SAT), and provide all the necessary documentation. Read more about our products on our [website](#)!

Our incredible team is here for you. Feel free to reach out to discuss how we can help you optimize your production. You'll find our contact information at the bottom of the newsletter.

New production line - Trepak Unscrambler™ (tube/vial sorter) + Pacing Capper™

This year started with a fun challenge for us at Trepak. It involved a lot of development, testing, and close collaboration with the customer. The goal was a production line that integrated the customer's existing filler.

The happy result: One Trepak Unscrambler (our machine for sorting tubes and vials, as well as closing filled vials), communicating seamlessly with the customer's own tablet filler, and our reliable [Pacing Capper](#) for capping the filled tubes.

🌟 Wow, what an exciting, inspiring, and genuinely fun project with fresh perspectives and clever, innovative solutions! 🌟

New filling machine - Trefill Flexi™

One of this year's major highlights so far has been the completion of our new filling machine [Trefill Flexi](#). This long-awaited filler left Trepak just before summer and has been running smoothly at a very satisfied customer in the chemical industry.

New machine line - Trefill Maxi™ + Pacing Capper™

As summer began to fade and make way for the approaching autumn, we completed a new filling and capping line for a customer in the chemical industry.

The machine line, consisting of the [Trefill Maxi](#) filler, with its impressive handling of large cans, connected to our popular and robust [Pacing Capper](#), has now been installed at the customer site and is up and running – more efficiently and with a higher production rate than their previous machine line.

Autumn and winter 2025 have even more in store...

★ For the rest of the year, we'll continue at least at the same pace – building more machines while our development team continues to update existing machines and create new ones! The cooler season ahead is already full with planned activities.

Don't hesitate to contact us if you have any questions about our machines or how we can work together to develop your production line – or if there's anything else we can assist you with.
