Autumn is here - behind the scenes at Västerbottenssåpa & our hot tip of the month

After a well-deserved summer break, the Trepak team is back and already busy launching new projects for the autumn and winter ahead! 🍁

In this newsletter, we'd like to share this month's hot tip. If you're looking for a machine with a short delivery time, keep reading... first come, first served! 🍷

We'll also check in with [Västerbottenssåpa](#), one of our newest line customers, to see how things are going and hear about their experience so far. 🍷

Now that autumn has finally arrived, we hope you'll have the opportunity to enjoy the beautiful autumn days while the sunshine and warmth are still with us. And as always, please don't hesitate to contact us if you'd like to discuss how we can help improve or optimize your production.

Take care, and we'll be in touch again soon!

Line delivery to Västerbottenssåpa in Vilhemina - how has it gone so far?

At the beginning of June, we installed a complete production line at the renowned [Västerbottenssåpa](#) in Vilhelmina, Västerbotten. The customer's new and first automated production line consists of an infeed table, conveyors, Trepak's own [Trefill Flexi](#), which, in combination with our [Floating Capper](#), efficiently fills and caps containers in a continuous flow. Following the capper is a custom-built labeling machine from [Logimark](#), followed by our new compact [Trepak Bottle Orienter](#), a carton erector from [Smipack](#), a palletizer from [Ropack](#), and finally a stretch wrapping machine from [Cyklop](#). The result is a sophisticated yet highly efficient production line where numerous processes must work seamlessly together; sensors triggered, cylinders move, machines communicate, and everything has to stay perfectly synchronized. 🍷

After installation of the new production line and several weeks of fine-tuning, because of many products and packaging formats, the customer is now fully operational and delivering its environmentally friendly, soap-based products to the market at a significantly higher rate than before. The highly flexible line can now handle volumes ranging from 150 ml up to 2.5 litres across five different packaging types, including trigger spray bottles, and 6-7 different cap types.

"By the middle of the week, the entire week's production had already been completed," says Per Lindberg, senior consultant involved in the project.

Per explains further that Västerbottenssåpa has invested for the future and expects production volumes to increase by more than 15 % annually through 2030.

"We produce bottles with standard caps at a rate of 55 units per minute and trigger bottles at 30 units per minute, creating a completely different production flow compared with what we had before the automation line was introduced."

Approximately 15-20 pallets of Västerbottenssåpa's products are produced daily and shipped to customers across Sweden. Trepak's production line will help the company achieve its ambitious production targets for the years ahead. The team at Västerbottenssåpa is very pleased with the new line and can now work according to the production plan established before the investment was completed.

What initially, and at times throughout the project, proved to be a challenging undertaking ultimately developed into a true success story. This was largely thanks to excellent communication between us and the customer, as well as outstanding support from the entire Trepak team, especially from our Service Department (Dan) and Automation Team (Alexander & Robin). 🍷

We are incredibly grateful to have such talented and dedicated colleagues. Fantastic work, everyone! 🍷 🍷 🍷

🍷 Finally, we at Trepak would like to extend a sincere THANK YOU to Västerbottenssåpa for their trust in us, and to all our partners and suppliers of the integrated equipment for their great collaboration throughout the project. 🍷

Pre-owned machine available for fast delivery - first come, first served

🍷 Monthly tip: Pre-owned 4-head filling machine available for fast delivery! 🍷

We are pleased to offer a pre-owned filling machine, tested and ready for operation, available for purchase in its current excellent condition - or rebuilt and customized to meet your specific requirements.

Depending on the extent of any requested modifications, the delivery time may vary. However, it will be significantly shorter than the lead time for a brand-new machine.

The machine is designed to handle volumes from 5 litres to 20 litres and is well suited for applications within the chemical and oil industries.

This filler is ideally combined with our capping machine [Pacing Capper](#).

Don't forget that...

If you have thoughts, questions, or simply want to bounce ideas with a trusted partner, don't hesitate to contact us. Our exceptional team is here for you. We'd be happy to discuss how we can help optimize your production. You'll find our contact details at the bottom of this newsletter.

Ready to take the next step in your production, but working within a limited budget? Investing in a new machine or production line should create value for many years to come. With the right **financing solution**, you can increase capacity, improve efficiency, and maintain the flexibility your business needs. Get in touch with us to learn more about the financing options available for your specific production requirements.

If you need a new service agreement or support for your existing machine or production line, please reach out to [Joakim](#) or [Kristoffer](#) in our sales team. They're your go-to contacts who can help determine exactly what your specific machinery requires, prepare the right agreement, and schedule service and support at times that work for you and your production. After that, our highly skilled service team, led by [Dan and Don](#), will visit your factory to perform the requested work and can also provide on-site tips and recommendations to make your production even better.

If you have any general service or support questions, please don't hesitate to contact us at service@trepak.se.

We're a development-driven company, and our machines and lines are custom-built to meet each customer's specific needs. We manufacture the machines on-site in Malmö, thoroughly test them both here and at the customer's location after installation (FAT and SAT), and provide all the necessary documentation.
